eLearning QA Process & Checklist

A Complete Quality Assurance Guide

QA Review Process

The QA Review Process provides an overall framework for systematically reviewing and validating an eLearning course before release. It includes a Test Matrix covering each screen or module across content, visual design, functionality, assessments, accessibility, LMS compatibility, browser and device compatibility, performance, and final results. The Log records identified issues, their severity, status, and retesting outcomes. The Final QA Review consolidates checklist results, test findings, defect resolution, retesting, and regression testing. Based on the complete QA assessment and resolution status, the Release Decision determines whether the course meets quality standards and is ready for deployment.

Quality is not the final step of eLearning development; it is the process that makes every step count.

Stage	Purpose / Components
QA Review Process	~ Overall workflow for reviewing the eLearning course.
Test Matrix	~ Screen/Module ~ Content ~ Visual ~ Functional ~ Assessment ~ Accessibility ~ LMS ~ Browser/Device ~ Performance ~ Result
Logs	~ Issue ~ Severity ~ Status ~ Retest
Final QA Review	~ Consolidates checklist results, test matrix findings, defect status, retesting and regression.
Release Decision	~ Final decision based on QA results.

Overview

This checklist provides a comprehensive quality assurance framework for reviewing eLearning courses. It covers non-functional and functional testing, including content accuracy, instructional flow, audio and video, design and layout, navigation, interactions, assessments, LMS/SCORM integration, browser and device compatibility, performance, and accessibility. The checklist is designed to ensure that the course functions correctly, meets instructional and design requirements, provides a consistent learner experience, and is ready for deployment.

Release principle:

A course is not ready because it looks correct. It is ready when learning, functionality, accessibility, tracking and delivery have all been validated.

1. Non-functionality Testing

Under Non-functionality Testing we have mainly use:

- **General Content Verification**

Test Area	Check
Text Content	~ All text is free from typos, spelling, and grammar errors. ~ Correct punctuation and capitalization used. ~ Terminology is consistent.
Instructional Flow	~ Content follows the approved storyboard/script. ~ Content aligns with the learning objectives. ~ Slide titles and screen numbers are consistent and logical. ~ Images, icons, and media are relevant and accurate. ~ Course structure is logical.
On-Screen Text	~ Matches narration (if applicable). ~ Proper alignment and visibility. ~ Instructions are clear and concise. ~ No text overlaps or truncations.
Language	~ Tone, clarity, and language level is appropriate for audience.

- **Audio & Video Testing**

Test Area	Check
Audio	~ Audio syncs properly with on-screen text and visuals. ~ Audio is clear and free of background noise. ~ Volume is consistent and adjustable. ~ Matches script exactly. ~ Volume is consistent and adjustable. ~ Correct tone, pronunciation, and pacing. ~ No audio overlaps or cuts off unexpectedly.
Video	~ Video quality is good (no blurring or pixelation). ~ Captions/subtitles are accurate and synced. ~ Player controls work (Play, Pause, Mute). ~ Animation timing is smooth and consistent.

- **Design & Layout Testing**

Test Area	Check
Images & Icons	~ Images are high quality and relevant to the content. ~ Unused or placeholder content has been removed. ~ Consistent style and size. ~ Branding (logos, colors, fonts) aligns with organization standards.
Font	~ Consistent font types, sizes, and colors are used throughout. ~ Spacing and alignment are visually balanced in each block. ~ Headings follow a logical hierarchy (e.g., H1, H2, etc.).

2. Functionality Testing

Under Functionality Testing we have mainly use:

- **Functional Testing**

Test Area	Check
Navigation	~ All buttons (Next, Previous, Menu, Submit, Custom Navigation, Exit) work correctly. ~ Branching logic is tested and follows the correct flow. ~ Locked/unlocked navigation behaves as expected. ~ All triggers perform the expected actions. ~ Course starts and ends properly.
Interactive Elements	~ Click, drag & drop, hover, tab navigation functions work correctly. ~ Audio and video elements play and pause as expected. ~ Hover and focus states behave as expected.
Bookmarks/Resume	~ Learner can resume from where they left off. ~ Bookmark prompt appears when required.
External Links	~ Hyperlinks (internal & external) open correctly in new tabs or as intended. ~ URLs are correct and active.
Progress Tracking	~ Course tracks completion per module/page or Variables (e.g., for tracking progress or scoring) behave correctly. ~ Progress bar or indicators update correctly

- **Assessment & Scoring Testing**

Test Area	Check
Quiz Functionality	~ All questions load properly. ~ Results slide displays correct score and pass/fail messages.

	~ Feedback layers (Correct/Incorrect/Try Again) display correctly.
Answer Choices	~ Randomization (if used) works properly. ~ No overlaps or formatting issues. ~ All answer choices are visible.
Quiz Navigation	~ Learners can revisit questions (if allowed). ~ Submit/Retry/Review buttons function correctly.
Scoring	~ Scoring/Partial scoring is accurate (points are calculate correctly) and updates variables correctly. ~ Final score displayed score matches calculation.
Assessment Reporting	~ Scores and statuses report correctly to LMS. ~ Retake logic works (if configured).

- **Accessibility Testing**

Test Area	Check
Keyboard Navigation	~ All interactions can be accessed via Tab/Enter. ~ Tab order is logical for keyboard navigation. ~ Focus indicators visible.
Screen Reader	~ Tested with JAWS/NVDA/Voiceover. ~ Labels, headings, alt-text are read correctly.
Color Contrast	~ Meets contrast ratio (4.5:1 for text). ~ Color contrast meets WCAG standards. ~ No reliance on color alone to convey meaning.
Captions & Alt Text	~ Videos have closed captions. ~ Audio has transcripts or closed captions. ~ All images have descriptive alt-text or null alt when decorative.
Time Limits & Pausing	~ Learners can pause timed interactions.

- **LMS Integration & SCORM Testing**

Test Area	Check
Launch & Tracking	~ Course launches in LMS without error. ~ Completion status updates properly. ~ SCORM/xAPI variables trigger as expected.
Resume Functionality	~ Bookmarking works on LMS. ~ Last visited screen remembered accurately.
Quiz Reporting	~ LMS reports learner scores, time spent, and completion correctly. ~ Final score matches what's shown in course.
Multiple Attempts	~ Course resets as required for retries. ~ LMS does not conflict with course settings.

- **Browser & Device Compatibility Testing**

Test Area	Check
Browsers	~ Tested in major browsers: Chrome, Firefox, Edge, Safari.
Devices	~ Course plays correctly on desktop, tablet, and mobile.
Responsive Design	~ Responsive layout adapts correctly across screen sizes. ~ No scrolling issues or clipped text/images. ~ Touch gestures work on mobile.
Performance	~ Course loads quickly. ~ No freezing, crashes, or long wait times.
